

## F 3222 – Azraq oasis area

Well F 3222 “AWSA 18 (AZRAQ)” is located in an area with several large abstraction wells in the Azraq oasis area. This well has the steepest current rate of groundwater decline in the oasis area. The water level is currently declining -1.75 m/yr, a trend which has remained fairly constant since a period of no data from 1999 to 2004. The combined saturated thickness of the Basalt and B4/B5 aquifers at this location is forecast to decline to 60 percent by 2030.
